

Wound-Healing Technologies: Low-Level Laser and Vacuum-Assisted Closure: Evidence Report/Technology Assessment Number 111

Filesize: 7.08 MB

Reviews

This ebook could be worthy of a read through, and far better than other. I am quite late in start reading this one, but better then never. I realized this publication from my dad and i advised this publication to learn.

(Stefan Von)

WOUND-HEALING TECHNOLOGIES: LOW-LEVEL LASER AND VACUUM-ASSISTED CLOSURE: EVIDENCE REPORT/TECHNOLOGY ASSESSMENT NUMBER 111

Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.Chronic wounds are a major source of morbidity, lead to considerable disability, and are associated with increased mortality; therefore, they have a significant impact on public health and the expenditure of healthcare resources. The incidence of chronic wounds in the United States is approximately 5 to 7 million per year, and the annual cost for management of these wounds is greater than \$20 billion. In addition, chronic wounds can lead to complications, such as infections, contractures, depression or limb amputation. These complications are associated with a need for assisted living and with higher mortality. The objective of this report is to systematically review the evidence on the outcomes of two technologies for wound healing: low-level laser therapy and vacuum-assisted closure. This report addresses the following specific questions: 1. In the treatment of chronic nonhealing wounds, what are the outcomes of low-level laser therapy for specific indications and patient types as a substitute for conventional therapy? Or as an adjunct to conventional therapy, compared with conventional therapy alone? 2. In the treatment of acute or chronic wounds, what are the outcomes of vacuum-assisted closure for specific indications and patient types as a substitute for conventional dressings? And as an adjunct to conventional therapy, compared with conventional therapy alone? This report also provides an overview of clinical and methodologic issues relevant to evaluating the evidence on interventions for wound healing. Many variables affect the course of wound healing; so well-controlled, randomized trials are necessary to reach conclusions on treatment efficacy. Skin wounds are a heterogeneous and complex group of disorders with a wide variety of causes. Approximately 70 percent are classified as pressure ulcers, diabetic ulcers, or vascular ulcers. Vascular...
